

Are you manually counting or calibrating your algorithms to process my videos?

No, definitely not! We are fully automated.

SWISSTRAFFIC.ai is a **fully automated service** that runs immediately when your video is uploaded. **Privacy is our priority**, and frankly, we are unable to watch thousands and thousands of hours of videos from users all around the world.

Just as your privacy is important to us, **the quality of the output** is important too. Therefore, we have an automated review system that reports in case the video does not meet **the essential requirements** for analysis, which can negatively impact the results. In this case, we review the results and inform the customers, but their videos **will remain private**.

If you are not satisfied, we will refund your credits! Try it by yourself!

SWISSTRAFFIC.ai pay attention to the quality of the results and therefore we offer an additional service **Guarantee of 100% results**. If you decide to use this program, our AI-based control system will come into the game and provide throughout analysis of the outputs and fix the incorrect results in a way that your traffic study is **impeccable and error-free**. This service can be purchased at any time in case you find out that the automated output did not match your expectations.
