PROJECT SUPPORT SUPPORT FOR BUILDING CONSTRUCTORS

EFFECTIVE CONTROLLING | ENVIRONMENTAL CONTROLLING | TRAFFIC INFORMATION

BEFORE start of construction

- Analyse mobility flow of motorized traffic, of bicyclists and pedestrians as well as public transport passengers
- Travel time, quantitative inquiry, daily flow variations, narrow passes
- Desire lines of the whole traffic including pedestrians and public transport passengers
- Motorized concept and definition of mobility indicators

DURING construction

- Review and comparison of BEFORE – DURING of the different mobility indicators in real time
- Forecast of low capacity
- Analysis of time loss and traffic jams
- Guarantee of access and flow of the whole traffic including pedestrians and public transport passengers
- Immediate action recommendation when signs of dysfunction show up
- Review of effectiveness of immediate actions
- Construction info straight to your mobile phone with webpage address

AFTER construction

- Comparison BEFORE – AFTER the different mobility indicators
- Effective controlling of projects and implemented measures
- Action recommendations if necessary
- Complete report for building constructors or planning authorities

mobility solutions

TRAFFIC MONITORING

BEFORE | DURING | AFTER

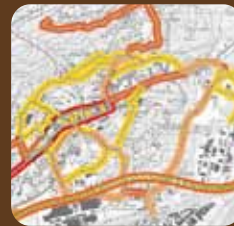

EFFECTIVE CONTROLLING

- Analyse mobility behaviour of all road users
- Analysis of indicators / target achievement
- Development of the modal split
- Time delays / congestion hours
- Cost of transport measures

Travel time loss

Barometer effect

Traffic information in real time

ENVIRONMENTAL CONTROLLING

- Check UVB targets
- Implement and monitor energy targets of 2000-watt societies
- Mobility accounting for energy cities

Slow Traffic

Motorized Traffic

Public Transport

TRAFFIC INFORMATION in real time

- Overview of the traffic situation around the building site
- Incident detection
- Online congestion reports / diversions
- Personalized construction information to all road users via SMS
